

The graph displays the FWHM ENC [keV] on the y-axis (0 to 250) against Peaking times on the x-axis (0 to 7). A red dashed line at 4 keV is labeled '4 keV'. Multiple colored lines with asterisk markers represent different channels. The yellow line shows the highest values, peaking at approximately 60 keV at time 3. Other lines generally stay below 50 keV, with some showing slight increases or decreases over time.
