

Figure 10 is a line graph showing the relationship between FWHM ENC [keV] (Y-axis) and Peaking times (X-axis). The Y-axis ranges from 0 to 200 keV, and the X-axis ranges from 0 to 7. A red dashed line at 4 keV is labeled "4 keV". The graph displays multiple data series, each represented by a colored line with asterisk markers. The series show a general trend of increasing FWHM ENC with peaking time, peaking around time 3-4, and then decreasing. The channels are color-coded: purple, green, yellow, orange, red, blue, and dark blue.
