

Figure 10 is a line graph showing the FWHM ENC [keV] (Y-axis, ranging from 0 to 12) versus Peaking times (X-axis, ranging from 0 to 7). The graph displays multiple data series, each represented by a different colored line with markers. A red dashed line is drawn at 4 keV. The FWHM ENC values for most channels are relatively stable, fluctuating between approximately 2.5 and 5.5 keV. Some channels show a slight increase or decrease over time, but none show a significant trend. The channels are represented by different colored lines with markers.
