

Figure 10 is a line graph showing the relationship between FWHM ENC [keV] (Y-axis) and Peaking times (X-axis). The Y-axis ranges from 0 to 80 keV, and the X-axis ranges from 0 to 7. A red dashed line is drawn at 4 keV, labeled "4 keV". Multiple colored lines with markers represent different input rates. The lines show a general trend of increasing FWHM ENC with increasing peaking times, with a significant peak around peaking time 3. The peak values range from approximately 10 keV to 33 keV.
