

Figure 10 is a line graph showing the relationship between FWHM ENC [keV] (Y-axis) and Peaking times (X-axis). The Y-axis ranges from 0 to 120 keV, and the X-axis ranges from 0 to 7. A red dashed line at approximately 4 keV is labeled "4 keV". Multiple colored lines with markers represent different channels, showing FWHM ENC values that generally increase with peaking time, peaking around 4.
