

The graph displays the FWHM ENC [keV] on the y-axis (0 to 18) against Peaking times on the x-axis (0 to 7). A red dashed line at 4 keV is labeled '4 keV'. Numerous colored lines with asterisk markers represent different channels. Most channels start between 2 and 6 keV at time 0. Several channels show an upward trend, with one channel (orange) peaking at 12 keV at time 6. Other channels fluctuate between 3 and 9 keV across the peaking times.
