

A bar chart showing the FWHM ENC [keV] on the y-axis (ranging from 0 to 4) against Peaking times on the x-axis (ranging from 0 to 7). The chart displays multiple data series for each peaking time, represented by thin vertical bars in various colors (blue, orange, green, red, purple, etc.). The FWHM ENC values generally increase with peaking time, with the highest values observed at peaking times 6 and 7, reaching nearly 4 keV.
