

Figure 10 is a line graph showing the relationship between FWHM ENC [keV] (Y-axis) and Peaking times (X-axis). The Y-axis ranges from 0 to 18 keV, and the X-axis ranges from 0 to 7. A red dashed line indicates a 4 keV threshold. Multiple colored lines with asterisk markers represent different data series. The graph shows that FWHM ENC generally increases with peaking time, with some series crossing the 4 keV threshold around peaking time 4.
