

The graph displays the FWHM ENC [keV] on the y-axis (0 to 80) against Peaking times on the x-axis (0 to 7). A red '4 keV' label is positioned near the bottom left. The data shows several channels with FWHM ENC values generally below 10 keV, with some fluctuations across the peaking times. The channels are represented by different colored lines and markers, including yellow, purple, blue, green, and red.
